

Controlling User Access

Objectives

- After completing this lesson, you should be able to do the following:
 - Differentiate system privileges from object privileges
 - Grant privileges on tables
 - View privileges in the data dictionary
 - Grant roles
 - Distinguish between privileges and roles

Controlling User Access

Privileges

- Database security:
 - System security
 - Data security
- System privileges: Gaining access to the database
- Object privileges: Manipulating the content of the database objects
- Schemas: Collection of objects such as tables, views, and sequences

System Privileges

- More than 100 privileges are available.
- The database administrator has high-level system privileges for tasks such as:
 - Creating new users
 - Removing users
 - Removing tables
 - Backing up tables

Creating Users

- The DBA creates users with the CREATE USER statement.

```
CREATE USER user  
IDENTIFIED BY password;
```

```
CREATE USER USER1  
IDENTIFIED BY USER1;  
User created.
```

User System Privileges

- After a user is created, the DBA can grant specific system privileges to that user.

```
GRANT privilege [, privilege...]  
TO user [, user| role, PUBLIC...];
```

- An application developer, for example, may have the following system privileges:
 - CREATE SESSION
 - CREATE TABLE
 - CREATE SEQUENCE
 - CREATE VIEW
 - CREATE PROCEDURE

- The DBA can grant specific system privileges to a user.

```
GRANT  create session, create table,  
       create sequence, create view  
TO      scott;  
Grant  succeeded.
```

What Is a Role?

Creating and Granting Privileges to a Role

- Create a role:

```
CREATE ROLE manager;  
Role created.
```

- Grant privileges to a role:

```
GRANT create table, create view  
TO manager;  
Grant succeeded.
```

- Grant a role to users:

```
GRANT manager TO BELL, KOCHHAR;  
Grant succeeded.
```

Changing Your Password

- The DBA creates your user account and initializes your password.
- You can change your password by using the ALTER USER statement.

```
ALTER USER HR  
IDENTIFIED BY employ;  
User altered.
```

Object Privileges

Object Privilege	Table	View	Sequence	Procedure
ALTER	√		√	
DELETE	√	√		
EXECUTE				√
INDEX	√			
INSERT	√	√		
REFERENCES	√			
SELECT	√	√	√	
UPDATE	√	√		

Object Privileges

- Object privileges vary from object to object.
- An owner has all the privileges on the object.
- An owner can give specific privileges on that owner's object.

```
GRANT      object_priv [(columns)]  
ON         object  
TO         {user|role|PUBLIC}  
[WITH GRANT OPTION];
```

Granting Object Privileges

- Grant query privileges on the EMPLOYEES table:

```
GRANT  select
ON     employees
TO     sue, rich;
Grant  succeeded.
```

- Grant privileges to update specific columns to users and roles:

```
GRANT update (department_name, location_id)
ON     departments
TO     scott, manager;
Grant  succeeded.
```

Passing On Your Privileges

- Give a user authority to pass along privileges:

```
GRANT  select, insert
ON      departments
TO      scott
WITH    GRANT OPTION;
Grant succeeded.
```

- Allow all users on the system to query data from Alice's DEPARTMENTS table:

```
GRANT  select
ON      alice.departments
TO      PUBLIC;
Grant succeeded.
```

Confirming Privileges Granted

Data Dictionary View	Description
ROLE_SYS_PRIVS	System privileges granted to roles
ROLE_TAB_PRIVS	Table privileges granted to roles
USER_ROLE_PRIVS	Roles accessible by the user
USER_TAB_PRIVS_MADE	Object privileges granted on the user's objects
USER_TAB_PRIVS_RECD	Object privileges granted to the user
USER_COL_PRIVS_MADE	Object privileges granted on the columns of the user's objects
USER_COL_PRIVS_RECD	Object privileges granted to the user on specific columns
USER_SYS_PRIVS	System privileges granted to the user

Revoking Object Privileges

- You use the `REVOKE` statement to revoke privileges granted to other users.
- Privileges granted to others through the `WITH GRANT OPTION` clause are also revoked.

```
REVOKE {privilege [, privilege...]|ALL}  
ON      object  
FROM    {user[, user...]|role|PUBLIC}  
[CASCADE CONSTRAINTS];
```

Revoking Object Privileges

- As user Alice, revoke the SELECT and INSERT privileges given to user Scott on the DEPARTMENTS table.

```
REVOKE  select, insert
ON      departments
FROM    scott;
Revoke succeeded.
```
